How great is your risk for
HEART DISEASE AND STROKE?

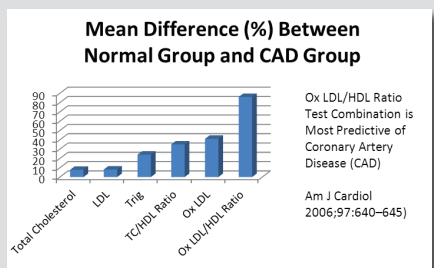

Testing your Oxidized LDL Is Crucial For
 Determining Your Risk For Coronary Artery Disease

The Oxidized LDL/HDL-cholesterol ratio test can identify more patients with Coronary Artery Disease than any other currently available lipid biomarker test.

Checking your Oxidized LDL cholesterol, along with your routine lipid profile, will help determine your true risk for heart disease and stroke.

With accurate information, you can make decisions with your physician that can help you reduce your risk of chronic disease.

Lab tests are among the best indicators for detecting chronic disease.

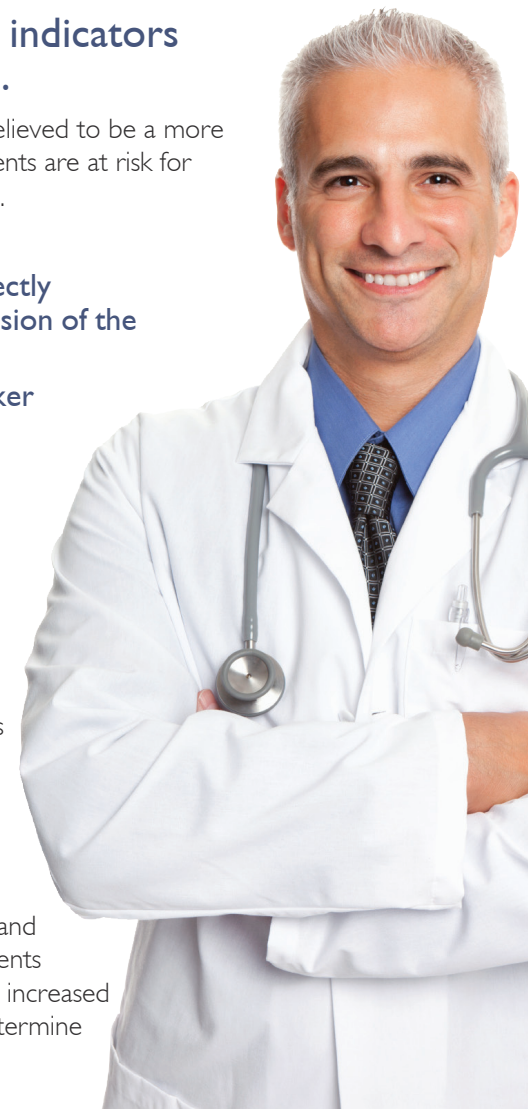

Measuring blood levels of Oxidized LDL is believed to be a more accurate method for determining which patients are at risk for developing Coronary Artery Disease (CAD).

It is now widely accepted that:

- Oxidized LDL is atherogenic and directly involved in the initiation and progression of the CAD process.
- Oxidized LDL is a predictive biomarker for the sub-clinical development of CAD and subsequent events.
- Oxidized LDL/HDL Ratio is a more accurate biomarker than other more traditional laboratory tests for measuring blood lipid levels as risk factors for developing CAD.

Cardiologists increasingly accept the measurements of circulating Oxidized LDL as a useful diagnostic tool. The Oxidized LDL/HDL-cholesterol ratio test can identify more patients with CAD than any other currently available lipid biomarker test.

It is possible to have significant inflammation and Oxidized LDL cholesterol. Unsuspecting patients with normal LDL cholesterol levels can be at increased risk of CAD. Therefore, it is important to determine your true risk with the Oxidized LDL test.

Highly Predictive (HP) Coronary Risk Panel

- Oxidized LDL
- Oxidized LDL / HDL Ratio
- hs-CRP

Ask your physician about CMB Laboratory's custom health panels.

Talk with your doctor about the Highly Predictive (HP) Coronary Risk Panel including an Oxidized LDL/HDL ratio.

This test can identify your risk for Coronary Artery Disease.
